Skin cancer clinic

Your journey into our skin cancer clinic is one that could help to save your life.

Using advanced technology Jema Clinic is able to utilise and provide progressive options for skin cancer detection and treatment. Our top of the range Mole Mapping machine allows for the accurate detection of skin cancers in their early stages and allows records to be kept, providing the doctors with references for future appointments. Your Journey starts with an assessment done by the accredited skin cancer doctor, followed by a comprehensive full body mole mapping photography done by the innovative Mole Mapping Machine. These images are recorded, and specific spots are identified, and noted on the patient database.

This is then followed by dermoscopy and evaluation. The discussion about the results, diagnosis and risk factors will take place. The best treatment options are discussed and management plan is then developed for the patient. Follow-up appointments are then booked.

General Practice

Your journey through general practice is something that is unique to you.

Your Journey starts with your first visit to the clinic where you will be asked to fill out a brief history form by reception. Once your details are entered you will be asked by the nurse to have your observations taken and then the doctor will collect further history from you in the consult room (family history, past history, allergies etc). The doctor can access and help with any urgent problems you present with but may ask you to request your records from your previous doctor so they can get a better understanding of what has been happening. In your second visit with the doctor he/she will go through all the correspondence received from you previous doctor and discuss any concerning issues with your. Your third and fourth visit will be about following up on past and present problems and working towards a long term management solution. By your fifth visit you will be considered a regular patient and your doctor will treat you as such.

Massage Therapy

Your Journey through our massage clinic can be a relaxing and rewarding experience as our trained masseuse work to help you achieve your health and wellbeing goals.

Your first visit will consist of an evaluation from the doctor who will speak to you about you problem, how massage is going to help and determine the risks involved in having the massage. He/she will then talk to the masseuse and you will receive treatment. Your second visit will review your first and discuss any problems or soreness etc that came from the first visit. The doctor will review any new problems that have arisen and then talk to the masseuse. By the third and fourth visit your masseuse and doctor will know you pretty well so these visits and onwards will again be tracking your progress, determining if massage is working for you, and discussing if there are any other options that may help.
